

Q.P. Code - SC3ITOOPS0316X

Note :- All questions are compulsory.

10

Q. 1 Attempt Any Two from the following.

- 1) Discuss object oriented approach.
- 2) Write a note on data abstraction.
- 3) Explain the concept of polymorphism with proper example.
- 4) Explain different forms of Inheritance.

10

Q. 2 Attempt Any Two from the following.

- 1) Write a C++ program to show the use of pointers to object.
- 2) Explain how class members can be accessed?
- 3) How memory can be allocated for objects?
- 4) What are the parameterised constructor? Explain with example.

10

Q. 3 Attempt Any Two from the following.

- 1) Explain the concept of binary operator overloading using friend function.
- 2) Write a C++ program to overload + operator.
- 3) How we can overload conversion operator? Explain with example.
- 4) Write a C++ program to overload relational operator.

10

Q. 4 Attempt Any Two from the following.

- 1) Write a note on abstract class.
- 2) Explain how polymorphism can be achieved at compile time and run time?
- 3) What is virtual base class? When do we make a class virtual?
- 4) Describe various classes available for file operation.

10

Q. 5 Attempt Any Two from the following.

- 1) Write a C++ program to show the use of assignment operator.
- 2) Write a note on stream manipulators.
- 3) Write a note on constructor and destructor.
- 4) Explain copy constructor.

10

Q. 6 Attempt Any Two from the following.

- 1) Write a note on iterator.
- 2) Write a C++ program to implement bubble sort algorithm using template function.
- 3) Write a note on standard C++ library.
- 4) List the three types of container.

15

Q. 7 Attempt Any Three from the following:

- 1) Write C++ program to implement bubble sort algorithm using template function.
- 2) Write C++ program to show the use of comparison operator.
- 3) Explain write () and read () function.
- 4) How we can overload subscript operator?
- 5) Write a note on Access specifier.
- 6) Write a note on class and object.

— The End —

Q. 6 Attempt any Two

- a) List out steps in order to execute dynamic SQL with DBMS-SQL package.
- b) What do you mean by Trigger? Explain the syntax of creating trigger.
- c) Explain following steps to execute dynamic SQL with DBMS-SQL package.
 - i) Execute SQL statement
 - ii) Bind column to cursor columns.
- d) Write short note on - instead of trigger.

Q. 7 Attempt any Three

- a) How to change the structure of created table? Explain with example.
- b) Write short note on With Clause.
- c) How PL/SQL blocks are nested? Illustrated with example.
- d) Explain FOR UPDATE & WHERE CURRENT clause of cursors.
- e) What do you mean by package? What are advantages of using package?
- f) Explain all types of trigger.

— The End —
